Martin Jasion

Platform Engineer

Warszawa, Woj. Mazowieckie, Polska

Podsumowanie

As a passionate Platform Engineer with 10 years of experience, I am dedicated to delivering exceptional results.

I have worked as a full-stack developer for the first two years of my career and as a Golang developer.

I have a deep understanding of application architecture, clean code, and the software development lifecycle.

As a problem solver, I am always eager to find new and innovative solutions to complex challenges.

Whether I am working on infrastructure automation, software design, or troubleshooting, I am committed to delivering high-quality results that exceed expectations.

Above all, I value collaboration and teamwork. I believe that knowledge sharing is essential to building successful projects and strong teams.

I am always eager to learn from and collaborate with my colleagues, and I am committed to fostering a positive and proactive work environment.

Doświadczenie

NatWest Boxed

Senior Site Reliability Engineer

lutego 2025 - Present (1 rok 4 mies.)

Warsaw, Mazowieckie, Poland

DataChain, Inc

Senior Platform Engineer(Remote)

lipca 2022 - grudnia 2024 (2 lata 6 mies.)

Warszawa, Woj. Mazowieckie, Polska

Iterative is a company that builds open-source tools for machine learning. The company also offers team collaboration products as a SaaS and self-

hosted solution. I joined 2 people Platform team, to maintain and improve the infrastructure, developer's tools, and processes.

Selected results:

Designed a multi-cloud platform for running distributed ML experiments with billions of objects(AWS

and GCP),

- Designed and implemented autoscaling of the Pods on Kubernetes based on the Celery queue,

- Designed the on-premise, enterprise edition of DVC Studio, devising an innovative approach that allowed the software suite to run reliably in arbitrary customer environments (e.g. EXSi, Hyper-V, KVM, and many others). Also I was a member of Customer Success team to help customers with on-premise installations,

- Implemented a new CI/CD pipeline for the DVC Studio, which reduced the time to deliver new features

by 50%,

- Coordinated large-scale engineering efforts pivotal to the successful attainment of SOC2 certification,

- Extend SaaS infrastructure to GCP cloud(hybrid cloud),

- Achieved a 40% reduction in cloud expenses by optimizing system designs,

- Improved disaster recovery resilience by expanding the scope of services controlled via GitOps + Infrastructure-as-Code, ensuring minimal data loss,

- Mentored engineers in new ways to optimize their efficiency, such as: Dev Containers, Remote debugging.

Equinix

Senior DevOps Engineer

sierpnia 2020 - kwiecień 2022 (1 rok 9 mies.)

Warszawa, Woj. Mazowieckie, Polska

Equinix is the leader in the colocation data center market. The company has 3 product development centers (Sunnyvale, Singapore, and Warsaw), which are building and maintain above 10 systems used by companies to manage the data center resources: manage resources in data centers, configure internet exchange points, configure network connectivity between different locations and much more.

I joined the company to implement CloudNative practices on K8s clusters, and make products GDPR compliant by automating Istio Service Mesh infrastructure for connectivity:

Selected results:

- Led migrations of 3 systems with 40 microservices to make systems infrastructure GDPR compliant,
- Designed architecture and migration process from on-premise to cloud environments,
- Delivered automation of cloud infrastructure(K8s, Istio Service Mesh, Observability, CD Pipelines),
- Support other teams in solving infrastructure issues(AWS, K8s, Networking),
- Mentor younger teammates to develop and maintain high quality of infrastructure code and design

Codility

1 rok 9 mies.

Senior Site Reliability Engineer

stycznia 2020 - lipca 2020 (7 mies.)

Warszawa, woj. mazowieckie, Polska

Codility is a technical interview platform to test the coding skills of developers and support hiring decisions. I joined company in front of migration from instance-based(EC2) infrastructure, to CloudNative using Kubernetes.

- * Keeping online services and associated infrastructure running in good health,
- * Ensuring the security of the infrastructure for unauthorized access and interruptions
- * Mentoring: helping younger teammates develop and maintain high quality of infrastructure code and design
- * Setting up and maintaining infrastructure development tools and other automation tooling,
- * Educating engineers in the subjects of modern use of cloud computing, standards, and good industry practices.

Technologies: Kubernetes, AWS, GitLab CI, Golang, Bash, Helm, Docker, Terraform, Grafana, Prometheus, Chef, Rake.

DevOps Engineer

listopada 2018 - grudnia 2019 (1 rok 2 mies.)

Warszawa, woj. mazowieckie, Polska

F5 Networks

Senior Software Engineer

lutego 2018 - października 2018 (9 mies.)

Warszawa, woj. mazowieckie, Polska

F5 is a global company specializing in application security, multi-cloud management, network security, and access & authorization. I joined the company to develop a product whose goal was to deliver a secure gateway for CloudNative services using the best knowledge from different F5 Products. The project ends up by the NGNIX acquisition.

Responsibilities:

- Implementing Cloud Native services in Go,
- Designing pipelines for executing different test types(unit, integration, and end-to-end with multi-project execution) on services and packaging them into Amazon Machine Image(AMI).

Technologies: Kubernetes, AWS, Golang, Java, gRPC, Helm, Docker, Terraform, Ansible, GitLab CI.

TouK

4 lata 2 mies.

DevOps Engineer

sierpnia 2015 - lutego 2018 (2 lata 7 mies.)

Warszawa, woj. mazowieckie, Polska

TouK is a software house company that makes solutions for external clients. It hires around 80 developers

In 2015 I changed the team to DevOps where I was able to learn and get experience as an infrastructure administrator and cloud solutions architect to help Clients migrate their workloads to Cloud.

Selected projects for clients:

- ELK Stack for aggregating 50 TB of data - for Play Mobile I designed and implemented a system for easily extending and managing ELK stack for gathering data from multiple internal services. The cluster was built by 16 nodes, in total 2TB of memory and 50 TB of disk storage.
- Play Now - in 2017 Play operator decided to build its own mobile operator. The goal was to deliver easily scalable and extensible infrastructure, compiled with a Cloud Native approach. I was responsible for designing pipelines for application delivery, and integration to third-party services e.g billing systems, and call-centers
- Virginmobile MVNO - for 2 years I was performing maintenance and infrastructure architecture improvements for a mobile operator. Technologies

used in the project were: AWS, RDS, Nginx, ELK stack, Terraform, and Docker.

Next to the client's project, I was the in-house administrator of internal services running on bare metal servers in the office, and in the cloud.

Responsibilities:

- Migrate part of internal infrastructure to Cloud(e.g. autoscaling GitLab runners in AWS),
- Building deployment infrastructure to deliver products to TouK clients,
- Creating monitoring solutions for running applications,
- Creating self-care web applications for internal company usage,
- Maintenance of systems and network infrastructure in the TouK office.

Technologies(small part):

- Linux, Puppet, KVM,
- Nginx, Haproxy, Apache, OpenLDAP, Postgres, Oracle, Mysql, Bind9,
- Grafana, Influx, ELK stack, Nagios, Icinga,
- AWS Cloud, Mesos, Marathon,
- Baremetal, Cisco and HP switches, PFSense 2.2,
- GitLab, Jenkins, Gerrit.

Java Developer

stycznia 2014 - października 2015 (1 rok 10 mies.)

Warszawa, woj. mazowieckie, Polska

At TouK I started as a Java Developer, where I was developing an application stack for a managing product catalog for Play Mobile operator, the Polish mobile operator.

Technologies used:

Java 7, Gradle, Spring(Boot, Core 4, DataJPA), Spock, Grails, Flyway, Liquibase, Tomcat, Jenkins, Oracle, Git, Scrum.

Risco Software Sp. z o.o.

Java Developer

grudnia 2012 - grudnia 2013 (1 rok 1 miesiąc)

Warszawa, woj. mazowieckie, Polska

Developing applications for financial institutions and private companies.

Projects:

- iGolf.pl - portal for golfers,

- Express Elixir Adapter - immediate transfer system(Express ELIXIR) for CitiBank S.A,
- Maintaining backoffice system for FMBank, BankBPS,
- Developing a system for the mobile payment system Paymax.

Technology: Spring, Hibernate, AngularJS, Bootstrap, Postgres, Git.

Warsaw University of Technology

Java Web Developer

listopada 2011 - marca 2012 (5 mies.)

As a student I started by carrer from developing a system for the Dean's Faculty of Electrical Engineering <http://isod.ee.pw.edu.pl>

Technologies used:

- Apache Wicket
- Hibernate
- PostgreSQL

Wykształcenie

Warsaw University of Technology

Master of Science in Engineering, Computer Science · (2013 - 2016)

Warsaw University of Technology

Engineer's degree, Computer Science · (2009 - 2013)
